WORK EXPERIENCE

Production and Maintenance Supervisor — Stellantis

Jan 2025 – Present

- Queried production databases with Python and SQL to analyze machine performance data and identify inefficiencies, driving a 5% reduction in production time through targeted process improvements.
- Diagnosed and resolved automation and robotics system failures, collaborating with engineers to maintain seamless production flow and minimize downtime.
- Identified a critical gap in program file continuity and engineered a recurring backup protocol for PLC and equipment programs, eliminating the risk of unrecoverable data loss across production systems.
- Reduced cycle times by 15% by optimizing movement patterns and eliminating excess time buffers, boosting overall efficiency.
- Conducted root cause analysis on cars and parts damage, delivering a 10% reduction in scrap.
- Authored technical documentation and standard operating procedures (SOPs), improving cross-team communication and knowledge sharing.
- Ensured full compliance with health and safety protocols across production operations, achieving the highest inspection score in the plant during a facility safety audit.

Tech Teacher — Lakeview Montessori School

Oct 2023 – Dec 2024

- Designed and delivered a technology curriculum covering coding, robotics, and digital literacy for K-8 students, translating technical concepts into hands-on, real-world projects.
- Coached and supervised a student robotics team, guiding them to reach the regional round of a LEGO robotics competition.
- Developed and administered assessments to track student progress, adapting instruction to individual learning needs.

Software Developer — Canadian Tire Corporation (Co-op)

May – Dec 2019

- Built real-time executive dashboards in an Agile development environment to monitor key metrics during major promotional events, enabling leadership to make timely, data-driven decisions.
- Deployed dashboard updates to production alongside cross-functional teams, maintaining reliability during high-traffic promotional periods.
- Built a monitoring dashboard on New Relic for system health and performance visibility.
- Partnered directly with the New Relic engineering team to test and provide feedback on New Relic 2 pre-release, contributing to a more stable production launch.
- Engineered a proof-of-concept automation for user access request tickets, cutting manual effort and supporting cost-reduction analysis.
- Streamlined the team's onboarding process, reducing ramp-up time and improving efficiency for new members.

Software Developer — Papp Plastics & Distributing Limited

May – Aug 2018

- Developed scheduling software for high-value industrial machines.
- Completed software updates and maintenance across company computer systems.

PROJECTS

Task Tracker (Next.js 16, TypeScript, Supabase, PostgreSQL, Tailwind CSS v4) — May 2026

- Engineered a multi-role task management backend with a 3-tier RBAC system (Super Management / Management / Worker) on Supabase/PostgreSQL, enforcing team-scoped data access at the API level with full task lifecycle management.

CareLog (Next.js 16, TypeScript, Supabase, PostgreSQL) — Jun 2026

- Built a multi-tenant family care-coordination app with Server Actions and middleware-enforced auth, using Supabase Row Level Security to scope medication logs, appointments, and task assignments per family group.

Discord Bot (Node.js, JavaScript, MongoDB, OpenAI API) — Jul 2025

- Built a feature-rich Discord bot integrating the OpenAI API for real-time Q&A and audio-stream music playback, with MongoDB schemas designed to persist a points reward system and user activity reliably across sessions.

Naveed Legal Suite (React, Vite) — 2026

- Designed and shipped a client-intake web application for a licensed paralegal, including a custom consultation-booking API and scheduling flow, deployed as a live production site.

Autonomous Vehicle Localization Simulation (C#, Unity) — 2022

- Co-developed a real-time position-mapping simulation as a CS Honours capstone, implementing localization algorithms across a 4-person team and 44 commits.

A* Pathfinding Visualizer (Python, Pygame) — 2022

- Implemented the A* search algorithm from scratch with real-time visual feedback and user-controlled obstacle placement.

EDUCATION

BCS[H] – Honors Computer Science — University of Windsor

Graduated

PROGRAMMING SKILLS

Languages: Python, Java, TypeScript / JavaScript, C#, C++, C

Backend & Databases: SQL, PostgreSQL, NoSQL, MongoDB, Supabase, RESTful API design

Frameworks & Libraries: Next.js, React, Node.js, Tailwind CSS, Electron, Vite

Tools & Practices: Git / GitHub, Agile development, Jira, VS Code, New Relic, Sumo Logic

APIs & AI: OpenAI API, Claude API (Anthropic), OpenWeatherMap REST API

VOLUNTEER EXPERIENCE

Mentor — STEM Hacks McMaster: Taught students the basics of coding; wrote C++ Arduino IDE code to simulate a car driving.

Philanthropy Chairperson — Sigma Chi Fraternity: Raised funds for Huntsman Cancer Research and The Trevor Project.
